

Standard Powder Paint Color Chart

Custom Products promotes the powder paint colors below for color matching of both architectural and safety related projects. Powder Paint Safety Colors are considered to be companion colors to the PMS printed utility and safety sign colors specified by ANSI (American National Standards Institute) and the APWA (American Public Works Association). All CPC Standard Powder Paint Colors meet AAMA Performance Criteria Level 2604/High Performance/Superior Performing Polyester to ensure your investment. They have an 80% Semi-Gloss appearance.

The digital colors represented in the charts below vary from screen to screen. The colors are for guidance only. Colors should not be chosen by screen color when an exact match is required. If an exact color match is critical, we offer a Branding Program. Further assistance and information regarding this program is available through the customer service department.
