

**PHANTOM POINT DEFINITION:** Sign dimensions are determined before the radius cut. Square or rectangle sign dimensions don't change after the radius cuts. However, triangular and pentagon signs do change after the radius cuts. Shown below, the measurements are from the "Phantom" points of the sign.

## Measuring Yield Phantom Points

### CORRECT

The **CORRECT** way to measure a **YIELD** sign is to measure the **(A2)** length of sides including phantom corners (shown in grey).

### INCORRECT

The **INCORRECT** way to measure a **YIELD** sign is to measure the length of sides from **(C2)** radius to radius or from **(D2)** top to bottom.

## Measuring Pennant Phantom Points

### CORRECT

The **CORRECT** way to measure a **PENNANT** sign is to measure the **(A)** **(B)** length of sides including phantom corners (shown in grey).

### INCORRECT

The **INCORRECT** way to measure a **PENNANT** sign is to measure the length of sides from **(C)** radius to radius or from **(D)** top to bottom.
